Professional Summary

Backend Developer with 1 year of experience building scalable backend systems and APIs using Python, Django REST Framework, PostgreSQL, AWS, and Docker. Experienced in solving real-world engineering challenges end-to-end and integrating MCP-based agentic AI systems with tool calling and multi-agent orchestration to enhance performance and automation. Passionate about distributed systems, database architecture, and building seamless, high-performance applications designed to handle large-scale traffic with a focus on scalability and continuous improvement.

Technical Skills

- **Languages:** Python, C, C++, HTML, CSS, JavaScript, Rust
 - **Frameworks & Concepts:** Django, Django REST Framework, Flask, FastAPI, Celery, MCP, OOPs
 - **Databases:** PostgreSQL, MySQL, SQLite, MongoDB
 - **Tools and Services:** Postman, Git & GitHub, Claude, AWS, Redis, Docker, SQS Queue
 - **Data science & ML:** Pandas, NumPy, Matplotlib, Seaborn, Linear Regression, Feature Engineering, Clustering Algorithm, Model Evaluation
-

Experience

Associate Software Engineer -- Engineer Philosophy Web Services Pvt. Ltd

May 2025 – Present

- Led backend development for a geospatial platform, modernizing legacy systems into a scalable architecture, improving stability, reducing issues, and boosting performance **for better user experience**.
- Designed high-performance APIs and backend services for local DB sync systems and geospatial mapping (PostGIS), integrating CRM systems (Zoho, Salesforce), payment workflows, and external APIs, **contributing to acquiring and retaining global clients**.
- Optimized large-scale database performance using **indexing** and **hash partitioning**, and managed containerized deployments with Docker and AWS for scalable, reliable production systems.
- Built a microservices-based architecture with a high-performance Rust tile server and async pipelines using Redis and **AWS SQS**, improving processing speed and system responsiveness by up to **80%** for large-scale geospatial workloads.
- Built an **MCP-based agentic AI** chatbot with tool calling and **multi-agent orchestration**, enabling real-world task execution and **AI-assisted workflows** within the product.

Python Developer Intern -- Engineer Philosophy Web Services Pvt. Ltd

Feb 2025 – Apr 2025

- Worked on real-world backend systems, handling production issues, API design, and database architecture planning across collaborative engineering teams.
 - Built backend modules and APIs from scratch, refactoring unstructured legacy code into a clean, scalable, and maintainable system.
 - Designed and integrated advanced backend features with geospatial processing (PostGIS) and robust database architecture, considering real-world query patterns, scalability, and performance to ensure efficient data handling and seamless frontend integration.
-

Projects

KitaabSe — AI-Powered Audiobook Generator (Founder & Developer) [LIVE](#)

- **AI-driven audiobook platform converting uploaded PDF books into real-time audiobooks** users to listen privately or publish publicly for global access — reducing screen strain and improving accessibility.
 - **Built a full-stack system with React, Django REST Framework, Redis background tasks, PostgreSQL, JWT Auth, and EdgeTTS + Gemini AI** for automatic audio generation, text extraction, and real-time processing.
 - **Implemented secure file handling, scalable Docker-based deployment (Render + Netlify), and live audio status tracking**, delivering smooth listening experience and supporting community-driven audiobook publishing.
-

Education

Bachelor of Computer Application (BCA) — Makhanlal Chaturvedi University, Bhopal
